RESERVATION

Single cluster on single site

Single cluster spanning multiple sites

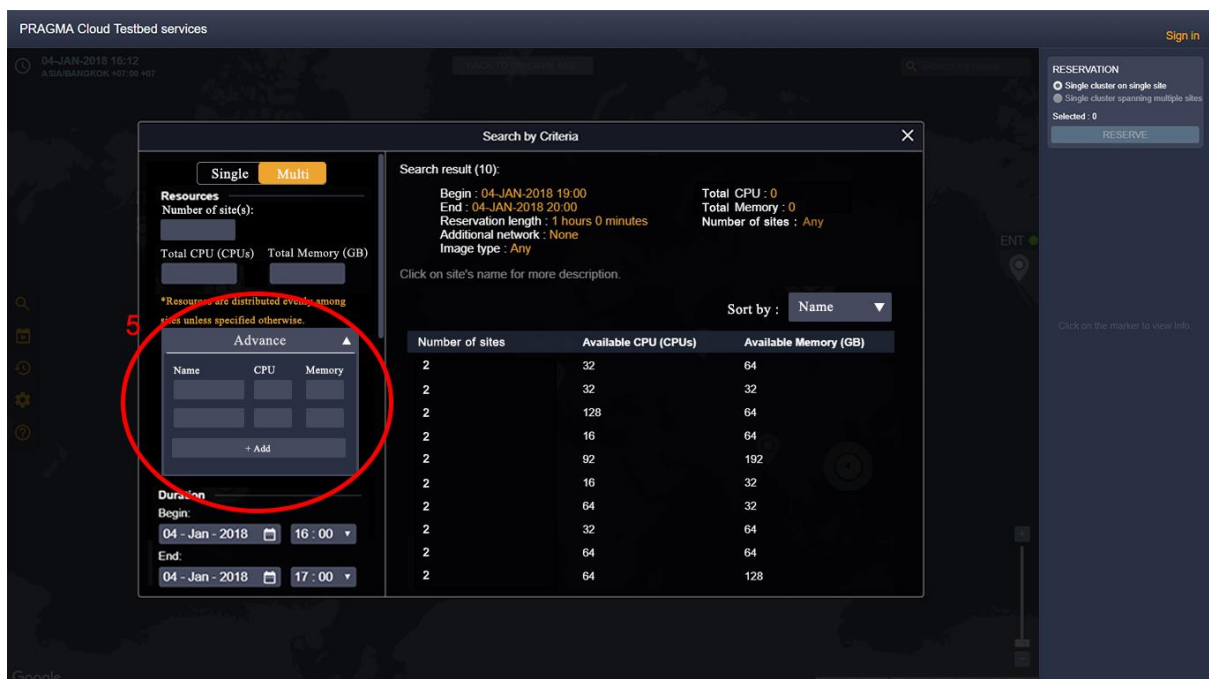

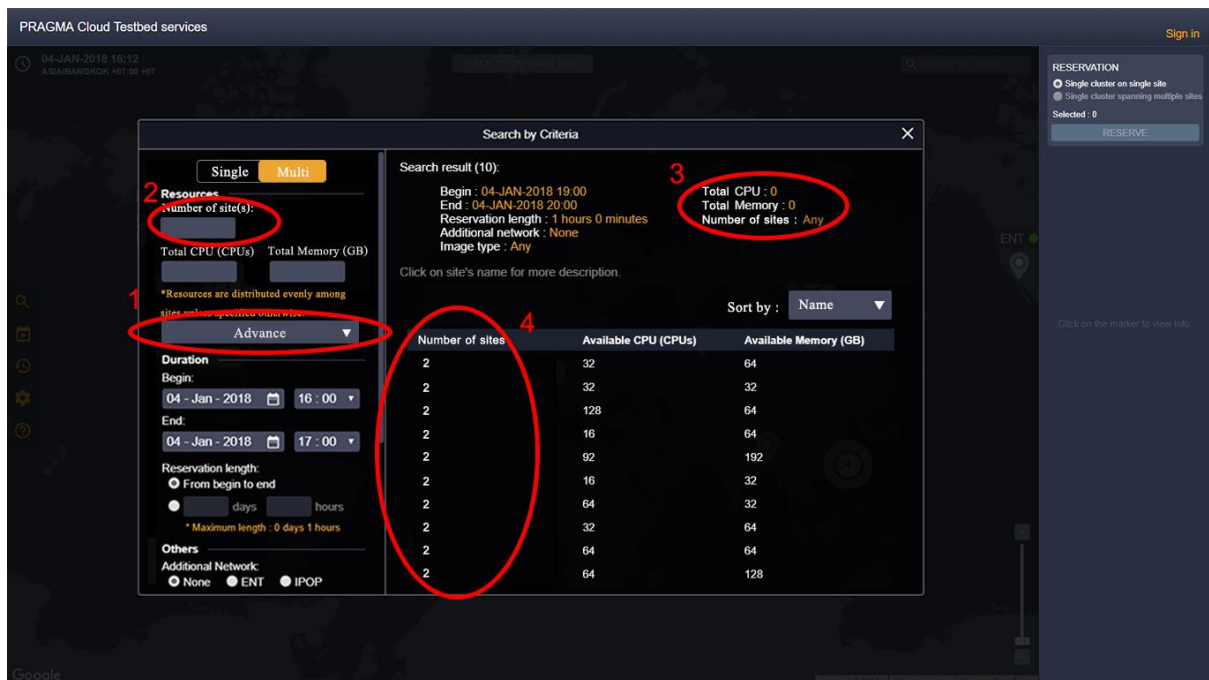

Selected : 0

RESERVE

Click on the marker to view info.

1. We add button for change mode between single and multi sites.
2. We add dropdown for sort the result by criteria.

Multi sites

1. This is advance of multi sites when you click it will expand and become to number 5 in third image.
2. It is a input for user add number of sites. It can input only number. If it blank it will search only the most less number of site.

3. They are information of multi-sites for user re-check search result.
4. They are the information for number of sites.
5. It is a input for users config multi-site by themselves. Default is 2 sites.

Question

1. How many minimum resource of multi-sites?

Ans. It isn't important because users have spec of resource for reservation before. We don't set default value.

2. Must the advance search of multi-sites be name of site or continent?

Ans. Name

3. Will The detail of site have only one or more than one CPU speed?

Ans. Only one CPU speed.

4. Will The result of multi-sites show all case or only case that less site?

Ans. Only less site.

5. Will we support in case indivisible resource?

Ans. We just support only memory that can divisible but CPU is not.

6. What are data that users use for sort result?

Ans. Name, Distance (Between user and that site), CPU, Memory and CPU speed.

7. If we can't find any group of multi-site that match with criteria how can we do?

Ans. If users specific site we will suggest same site but other time or other site but same time. If users don't specific we will suggest other time.

Example

Site UF(America) AIST(Asia) UF(America) TU

case1

Share Equivalent style. However, if you have enough resources, you will not be able to complete the first case.

Search result for multi-site resources :

Total CPU: 16 Total Memory: 64GB

Begin: 5 Jan 2018 Time:20:00

End: 6 Jan 2018 Time:03:00

Reservation length : 7 hour

Additional network : any

Image type : any

Site 3: UCSD CPU:4 Memory :16GB

Site 4: TU CPU:4 Memory :16GB

case 2

Site 1 share smallest resource to Site 2, only to use the Muti-Site system

ratio of CPU to memory is 1: 2.This case is only used for The user wants to use the Muti-site system regardless of the size of the resource.

Search result for multi-site resources :

Total CPU: 16 Total Memory: 64GB

Begin: 5 Jan 2018 Time:20:00

End: 6 jan 2018 Time:03:00
