

I was deploy on <http://rocks-54.sdsc.edu/cloud-scheduler>.

## Fontend task

- Do not allow any on image type. (done)
- Set default of Image type to the first choice of Image type not any. (done)
- Change 'from available' to 'free/total'. (done)
- CPU and Memory in search result item that match with the amounts in the query form. (done)
- Commented out region. (done)
- Modified the format of search result item to the new one but still works with the results returned from the existing API. (done)
- Leave CPU and network speed empty. (done)
- Deployed the front end to the server according to Shava's instruction. (done)
- Do not allow blank on CPU and Memory. Validate and tell an error if users leave these blank. (done)

- Date and time in the search result item does not match the data and time specified in the query form. (done)
- When users click on result card. It will show the information of a site on right. Now, that support on the single site. (done)

### **Backend summary work**

I have done search The muti to print json out to the front, as well as to cut the information that I "think" unnecessary out in the sitemanager. pragma\_boot\_path path pragma\_boot\_version python\_path temp\_dir and site\_hostname I need to edit the sitemanager to send the required information //all have not tested because it is missing a bit more. The file will be search sitemanager up the server, but it has not been overwritten with the existing because it is broken. I did not break the code because I had to find the cause.
