

Meeting minutes # 5

From meeting date : 11 JAN 2017 9.00-10.00 AM

Next meeting date : 27 JAN 2017 9.00-10.00 AM

Today, we've talked about

- Class diagram for business logic layer
- What we've done for using Python on VM.
- User maybe can see the map which shows list of sites without authentication.
- We don't need to concern about concurrency for front-end so much, only concern about concurrency in database.
- We've tried to do following the link you gave:
["http://stackoverflow.com/questions/20214595/call-php-function-from-python"](http://stackoverflow.com/questions/20214595/call-php-function-from-python) and it works, only have some warnings about session_start() but we will find how to fix it and we will also find the way to access the database without using BookedAPI.
