

Meeting minutes # 2

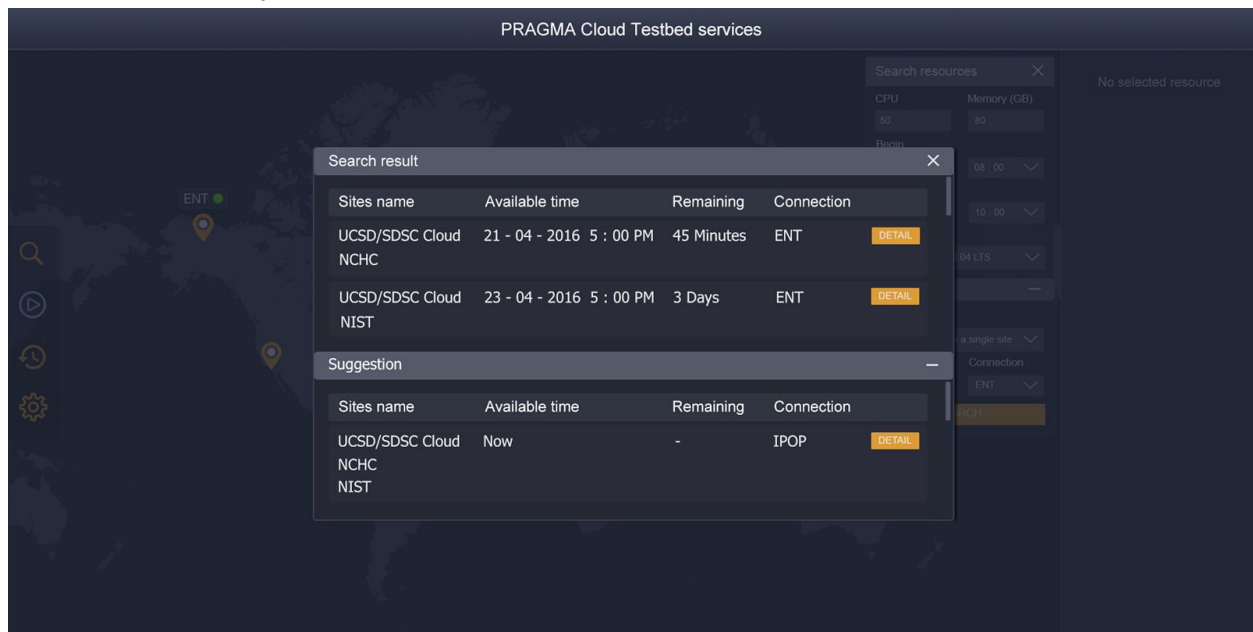

From meeting date : 26-10-2016 8.00-9.00 AM

Next meeting date : 09-11-2016 8.00-9.00 AM

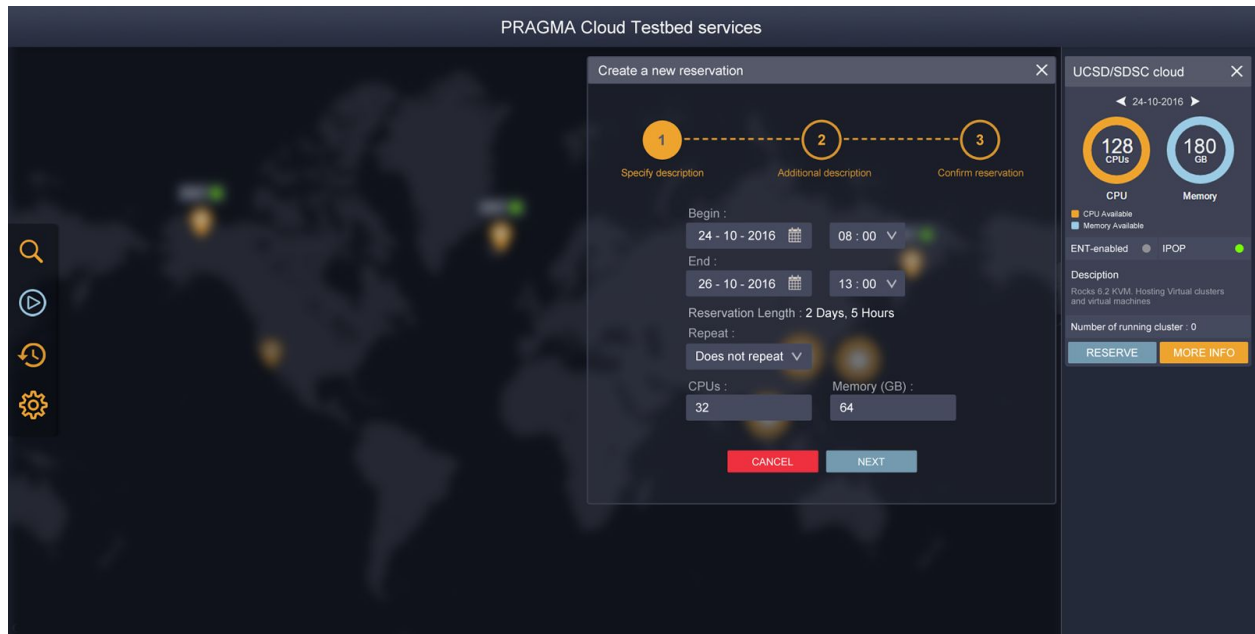

Today we've discussed about the UI flow of 5 tasks:

1. Dashboard
2. See site description
3. Create a new reservation
4. See reservations (as admin)
5. Search resources or filter

Comment from Nadya and Prof.Prapaporn:

- Searching resources or filtering is not clear enough.
 - It should be removed the column "Remaining" and show only the available time of each resource groups which has to be changed the title of column to be "Available on".
 - It has to be added the "Reserve" button, which is an easy way to reserve the selected resource group.
 - Time format should be changed to be "YYYY-MM-DD" or day-month(in letter)-year ex.23-APRIL-2016
 - It should show numbers of search results.

- For creating a new reservation, the selection of repeat type should be removed or hided.

- For clicking the site icon and showing the description on the right, it should can be selected for reserving as single cluster spanning multiple sites, such as by using ctrl and click the card of resources that user wants, and then reserve with all site selected.
- For all tasks, we should concern about customizing for another resource types such as sensor site.
